

Clark County 2015 Stormwater Manual Implementation Summary of Procedure

This procedure statement documents discussions and decisions from Environmental Services, Community Development, Public Works and Prosecuting Attorney's office. Implementation of new stormwater regulations require staff to work through specific details of the regulations with applicants. The purpose is to ensure consistent application of county requirements. These procedure statements document decisions for future reference and will be kept on the [ClarkNet web page](#) (Environmental Services).

Procedure statement #2015-005 – April 12, 2016 **Dispersion to Preserved Native Vegetation**

The county requires dispersion areas used to meet the requirements of "BMP T5.30A full dispersion into native vegetation" on projects triggering MR #1-#9 to be delineated on the stormwater plan. A covenant referencing the stormwater plan as an exhibit showing each dispersion area must be recorded. This is similar to stormwater covenant recorded for each private stormwater facility.

As for the 65% native vegetation preservation area also required by the full dispersion into native vegetation BMP, the extent of the preserved native vegetation must be documented in the TIR and shown on the stormwater plan, but no covenant will be required. Future development of the preserved area will require compliance with the applicable code at the time of any future land disturbing activities.

End of procedure
